

Study for Teens with and without Depression

The Olin Neuropsychiatry Research Center of Hartford Hospital/Institute of Living seeks right-handed teenagers (ages 12-18) with and without Major Depressive Disorder (MDD) or past MDD to participate in an MRI-based study.

Qualified volunteers for the study will participate in an interview, some questionnaires, neuropsychiatric tests and a non-invasive brain imaging scan.

Volunteers will be compensated 20 dollars an hour for their time. The study is expected to take 6-8 hours total and can be split into separate visits, if desired.
